

Universe

Go to <https://iapandora.nl/p/PNWpAjkP1eMGpAn> to find a map of an unknown solar system. To identify this solar system, every planet needs a name. Luckily, a list of names for planets in this solar system was already found! Determine which name belongs to which planet, and you might find the answer you're looking for.

SUN	ROCKET	WORMHOLE
VOID	NEBULA	ASTEROID
STAR	LAUNCH	LIGHTYEAR
ORBIT	COSMOS	ASTRONAUT
COMET	SPHERE	CELESTIAL
ALIEN	PARSEC	SUPERNOVA
FLYING	GRAVITY	INTERSTELLAR

Each planet has perfect spots for letters in their names, start with the arrow.

Fill in the blanks below with the letters **S-P-A-C-E** in the correct order to find out which name belongs to which planet.

All planets with _'s in the name have the same size.

All planets with _'s in the name are on the same side of the asteroid belt.

All planets with _'s in the name either have a moon, or all don't.

All planets with _'s in the name either have a ring, or all don't.

All planets with _'s in the name have the same color.
